

Eyes on the Skies

Eyes on the Skies: Managing Air Traffic in Canada

Space required: 1,050–1,200 ft² (98–110 m²)

Canada manages a vast air space—over 18 million square kilometres. **Eyes on the Skies** examines the rapid evolution of air traffic management, exploring the systems, people, and technologies that keep these busy skies safe.

Visitors can discover the stories of industry insiders—past and present—and learn how factors like gender have impacted air traffic management in Canada. This exhibition, developed by the Canada Aviation and Space Museum, features engaging videos and visuals that break down complex ideas, such as how radar works. Visitors can test their skills through a variety of digital experiences, and consider if they have what it takes to manage air traffic safely.

Target audience

- Intergenerational family groups
- School groups

Languages

- All elements are bilingual

Support material

- Educational resources
- Promotional resources
- Condition report
- Installation and packing guides

Space requirement

- 1,050–1,200 ft² (98–110 m²)
- Multiple configurations possible

Shipping and installation

- 13 Crates on wheels / 7,800 lb (3,540 kg)
- Set-up: 2 days / 4 people

Insurance

- Borrower must provide an insurance certificate.

Fees

- Please contact us for details
